Homework 7 - Object Oriented Programming

In this homework you are going to get the chance to write implement a Matix class in java as well as learn to read the JavaDocs

Part 1

Create a new Class with the name Matrix and implement all the functionality shown in Matrix.pdf

As long as your class conforms to the specifications the implementation details are up to you.

In order to test your code you will also get a file called MatrixTest.java. You can run that file in the same directory as your Matrix class to confirm it works before submitting.

You only need to submit Matrix.java to submitty
